RECARO 24H CHAIR

This is provided with various functions that naturally lead the shape of the spine in sitting posture to S-shape, which is said to be the best for the lower back.

As a manufacturer of car seats which have been highly acclaimed in the world as being “fatigue-free”, RECARO can mitigate strain on the lower back and can prevent backache by taking advantage of its history, philosophy, and technology for “sitting”. Besides being used at over 70 fire department command centers nationwide, the RECARO 24H CHAIR is used for the base for the driver’s seat of the 700/500/800 series Tokaido Shinkansen bullet train.

This is a “professional-oriented” office chair which is highly trusted by many people engaged in work requiring long hours of sitting and is increasingly used in various fields.

RECARO

Aiming to realize a chair that does not fatigue the lower back even after long hours of sitting

Provided with functions to adjust each part, including the air lumbar support which helps naturally keep the posture of "being seated as if standing" that minimizes stress on the lower back from the orthopedic point of view. It offers seating comfort almost equal to the ideal custom-made product to conform to each body shape. This office chair with high practical value protects the lower back during long hours of sitting and helps increase work efficiency.

[Air lumbar support]

Maintaining the spine in S-shape, which is orthopedically said to be the best for the lower back. The swell on the lower back area of the backrest is freely adjustable with an air pump (manual type) to be the most comfortable size.

[Armrest height & angle adjustment function]

The elbow rest is adjustable to the most suitable height within a vertical range of approximately 80 mm and the most suitable horizontal angle within a range of about 30 degrees.

- Height adjustment
- Angle adjustment

[Seat height adjustment function]

Height setting to ensure comfortable sitting even for petite ladies. Fine adjustment is available within a range of about 70 mm.

[Angle rocking mechanism]

Mechanism focusing on the fitting comfort of the body. While in rocking, the seat face return position can be changed to three degrees forward tilting from the horizontal position.

[Rocking hardness adjustment]

By turning the knob, you can adjust the backrest rocking to an appropriate hardness.

[Headrest height & angle adjustment function]

Headrest height and angle are adjustable to the best position for body size.

- Height adjustment
- Angle adjustment

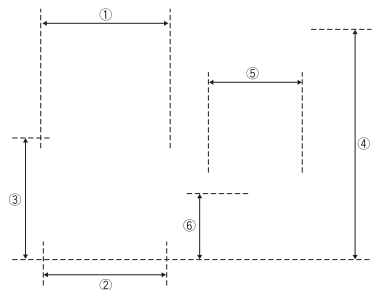

[Stepless recliner adjustment]

According to seating comfort, the backrest angle is adjustable within a range of about 50 degrees back and forth.

[Seat rocking mechanism]

Mechanism to mitigate constraint feeling while you are seated. The entire seat can be rocked back and forth within a range of about 16.5 degrees.
